Hey guys me again

When I was inspecting the latest two rear lockers that just came in I found one with a small pin hole in the primer that has a crack in it. To me it appeasers to have been caused by a bubble in the primer. You can see it in the attached pictures on this email. It's not a huge issue but it does prevent us from releasing the part.

Isam I don't believe that this deserves to be returned due to the fact that we can do a minor touch up to the primer here. It only requires some minor buffing to remove the primer in that location and re priming the complete rear locker to have the color match. This can be scheduled in this weekend and would be ready to be put into a box on Monday afternoon. But it's something that we would like to avoid in the future. Please let me know that this is acceptable.

Thanks
